Earth Science Department

May 25, 1999

National Science Foundation  
DUE CCLI Program

To Whom It May Concern:

We in the Earth Sciences program at Minot State University are pleased to cooperate in the testing of the Geology Explorer educational software product. In our general education sections of Environmental Geology (ES 100) for Fall, 1999, we will test this software in 2 classes with a total enrollment of approximately 160 students. We will also administer the pre- and post-test assessment of the software to evaluate improvement of learning by our students. We intend to continue this cooperative testing of the Geology Explorer educational software in the future.

Sincerely,

*Clark Markell*

*Rose McKenney*
